

SPACEWatch Storage Suite

Version 6.0

Model future storage cost – and which cleanup projects will save most money

Use the Scenarios tool with storage audit data gathered by SPACEWatch to model change – and compare this with the “do nothing” scenario.

Make users and departments accountable

Automatically email reports detailing worst offenders – e.g. those with most duplication, unused files, or files of illegal types like MP3.

- Largest Space Users
- Top Users with Unused Space
- Top Users of New Storage

Construct your own custom reports and demonstrate change over time to top storage hogs.

Automatically manage common storage issues

Take a cost effective approach to archiving unused files to cheaper secondary storage – or routinely deleting illegal file types.

Make your team more effective

Instead of working in the dark – or spending hours trying to analyze storage use – your team can share the same file-level view of your network from SPACEWatch client. Get instant results to even the most complex queries.
